

WARBURN

Supreme Breeding Quality since 1961. For Length, Growth Rate & Fertility

29th Annual on property sale

Wednesday 30th September, 2026

Commencing 12.30pm

Interfaced with  AuctionsPlus®

241034 (\$8,500) Top price 2025

Offering:

24 White Suffolk Stud Rams **147** White Suffolk Flock Rams

9 Poll Dorset Stud Rams **51** Poll Dorset Flock Rams

Warburn Contacts:

Mark 0407 505 486

Amando 0427 487 987

**Brucellosis
Accredited
76596**

Warburn's 29th Annual On Property Sale

Wednesday, September 30th 2026. Inspection of stock commences at 10.30am on morning of sale.

Stud Sale commencing at 12.30pm followed by Flock Ram sale. Interfaced with Auctionsplus.

BBQ lunch and afternoon tea provided.

Vendor:

A & M Dissegna "Warburn Stud" Kidman Way Warburn Via Griffith NSW 2680.

Phone 02 69634517 Mobile Amando: 0427 487 987 Mark: 0407 505 486

Warburn Poll Dorset Flock no 779

Warburn White Suffolk Flock no 72

Health Status

*Ovine Johne's MN3 No 142 *Brucellosis Accredited No 76596

Warburn is a closed flock, and sheep are declared to be footrot and lice free.

A Sheep Health statement will be provide to all who buy rams at the sale.

All rams have been Gudair Vaccinated & Glanery 7 in 1.

Condition of Sale:

ANY PERSON INSPECTING OR HANDLING SHEEP MUST DO SO IN A SAFE AND PROPER MANNER SO NOT TO INCUR INJURY TO THEMSELVES OR TO OTHERS. ALL CHILDREN MUST BE UNDER THE SUPERVISION OF A RESPONSIBLE ADULT AT ALL TIMES. BUYERS INSTRUCTION SLIP, (AT THE BACK OF BOOK) MUST BE PRESENTED AND SIGNED, BEFORE SHEEP WILL BE RELEASED.

SELLING AGENTS.

Nutrien Ag Solutions Phone: 02 69621811

Spencer & Bennett-Yenda Prods Phone: 02 69668900

Elders Griffith Phone: 02 69692900

2.5 % rebate to outside agents in attendance introducing new buyers & settling on their behalf within 7 Days of invoice.

Warburn Reserves the right to collect semen from any of our rams for in flock use only.

This will be at our expense and at the purchases convenience.

The minimum price for a ram to be individually registered as a stud ram will be \$3,000.

Warburn Management

Warburn Stud has been totally committed to serving the prime lamb industry since 1961. At Warburn all lambs are tagged at birth for accurate pedigree recording of sire and dam. All lambs are weighed at birth, 100 days (weaning) and again at 200 days, when they are also carcass scanned by an accredited Lambplan scanner for muscle and fat depth.

This information is processed by Sheep Genetics, the national performance recording database, to generate ASBVs (estimated breeding values) for each animal for a range of commercially important traits. ASBVs are estimates of an animal's genetic potential for traits based on actual measurements taken on individuals, with consideration and correction for the environmental factors impacting their performance (date of birth, single or multiple birth type, age of the dam, management group). Using ASBVs allows buyers to benchmark and compare Warburn rams against all other recorded terminal sires across Australia, and more effectively select the rams that meet their breeding objectives for their target market. Warburn clients can buy with confidence, knowing the lambs they produce will be more even as they have taken the guess work out of selecting their sires for consistent performance.

At Warburn we place strict selection criteria on our ewes to ensure the rams we breed will perform in the prime lamb market. To be retained for breeding, ewes must possess structural correctness and breed type, as well as balanced ASBVs with particular emphasis on growth and muscle. Our genetic selection is aimed at breeding a quick growing, muscled lamb, ideal for the sucker market. Our ewes are individually allocated to sires based on their attributes to breed the best progeny possible. We utilise key industry sires through artificial insemination, as well as trialling the best Warburn rams via natural mating.

We have now begun Genomically testing some of our sires and selected rams. This is enabling us to better assess their genetic potential for hard-to-measure eating quality traits (IMF & SHEARF5). We are looking forward to sampling larger numbers in the future as this information becomes increasingly important to our clients.

Warburn also prides itself on its animal health management. All our sheep are drenched (rotation system) and vaccinated with GlanEry 7-1, with our lambs being vaccinated twice. We test for Ovine Johne's Disease (MN3 status) and also Vaccinate Gudair, Warburn is also Brucellosis accredited.

Buyers can be confident when selecting their purchase of flock rams at our 29th annual on-property sale that all rams have had their health treatments, are fit and healthy and ready to work.

Warburn History

Warburn Stud began with a small flock of Dorset Horns in 1961 and gradually changed to Poll Dorset as the demand increased.

In 1980, the meat testing services (now Lambplan) commenced in the area. Seeing the advantages, the Dissegna family became one of the first to be involved in the program.

1988 marked the entry of the White Suffolk breed to our stud and the purchase of "Beredale" Poll Dorset Stud.

After several visits to Kirra Quarantine Station and seeing the superior American Suffolk, came the purchase in February 1992 of an American Suffolk ram. Warburn became the first stud to use these superior genetics in NSW, introducing a larger frame sheep. Since 1993 Artificial Insemination (AI) has played an important part in enabling us to select superior sires across the country. In December, 1997, Warburn stud achieved Ovine Johne's MM1 status. This brought about the decision to have our first on property ram sale in 1998.

In 1999, Warburn saw the introduction of another exciting new breed to our stud, the South African Meat Merino (SAMM). In 2002, Warburn achieved and continues to hold its MM3 status which requires regular testing. After a 20 year hiatus, Warburn returned to exhibiting at major shows in 2004.

Since then, Warburn has achieved 3 interbreed champions, and many Champion and Reserve Champion rams and ewes, also winning the most successful exhibitor 5 times. Warburn sold its first sheep internationally in 2016, with 27 SAMM ewes and 22 SAMM rams to China.

In 2017 Warburn achieved our on property record price for White Suffolk at \$21,000. At the same sale Warburn also sold a half share ram(\$16,000) to Montana, USA.

Sires abbreviations used in catalogue

A	Anden
ASH	Ashmore
B	Bruan
BD	Bundara Downs

Memo of Sires

Sire	Sire of sire	Comments
Warburn 220095	Langley Heights 180231	Excellent PFAT,PEMD and eating quality traits.
Warburn 220454	Warburn 210364	Excellent backline and width of loin.
Warburn 220589	Felix 191175	A very correct ram great length and backline.
Warburn 230166	Valma 202189	High muscle, early maturing ram.
Warburn 240855	Farrer 220103	Used as a lamb. High growth , good muscle.
Warburn 230642	Warburn 220095	Big long ram, excellent top-line.
Warburn 220089	Langley Heights 180231	Thick muscled ram.
Warburn 170142	Bundara Downs 122261	Excellent hindquarters and growth. Out of show ewe.
Warburn 190002	Warburn 160082	Excellent width of loin and hindquarters.
Leith 210887		Used in our AI Program. High Muscle.
Felix 231354		Used in our AI program. High Growth.
Yanco 210004		Used in AI Program. Proven sire.
Warburn 210641	Linton 160625	Excellent Eating quality traits.
Warburn 240746	Warburn 230160	Used as a lamb. High Growth.
Warburn 220227	Felix 160494	2022 keeper ram.
Valma 230162		Used In our AI Program. Excellent LEQ traits.

Understanding Lambplan ASBV's

BWT— birth weight

Rams with lower ASBVs for BWT produce lambs with lower birth weight. Both low (lamb survival) and high (lambing difficulties) birth weights should be avoided.

WWT— weaning weight

Rams with a more positive ASBV for WWT will, on average, produce lambs that grow quicker to weaning (approx. 100 days of age).

PWT— post-weaning weight

Rams with more positive ASBVs for PWT produce lambs that grow quicker and reach target weights in a short time (approx. 200 days of age).

PFAT— post-weaning fat depth

Rams with a more positive ASBV for PFAT will produce lambs that are fatter, at the same weight. Consider you ewe base genetics when setting targets for PFAT. PFAT is expressed in mm units.

PEMD— post-weaning eye muscle depth

Rams with more positive ASBVs for PEMD produce lambs that have more muscle, independent of weight, and a higher lean meat yield. PEMD is expressed in mm units.

LMY— lean meat yield

Rams with more positive LMY produce lambs that have a higher lean meat yield percentage at slaughter. Lean meat yield is expressed as a percentage of the initial hot standard carcass weight, with all bone and salvage fat removed.

IMF— intramuscular fat

IMF is a measure of the chemical fat percentage in the loin muscle of a lamb and is often referred to as marbling. Rams with more positive IMF ASBVs produce progeny with higher levels of intramuscular fat.

SHRF5— shear force

Shear force is a measure of the force or energy required to cut through the loin muscle of lamb after 5 days of ageing. The ASBV is reported in deviations of kilograms of force. Rams with more negative SHRF5 ASBV produce lambs with more tender meat.

PWEC— Post Weaning worm Egg Count

Rams with more negative WEC ASBVs produce progeny who have a higher genetic potential to resist worm burdens. Lower WEC ASBVs are desirable.

Understanding Lambplan Indexes

Terminal Carcase Production (TCP) index

Summary of the TCP index

- The TCP index targets improvement of terminal sire performance in prime lamb production systems.
- TCP balances increased lean meat yield with modest improvements in eating quality.
- Genotyping young rams makes TCP more effective by improving the accuracy of carcase and eating quality ASBVs.

Production system outline

This production system is for a prime lamb operation where terminal sires are joined to ewes of a Merino/maternal breed or cross. The TCP index focuses on increasing weight and muscle while reducing carcass fat, which contribute to higher lean meat yield. TCP also has emphasis on modest improvements in eating quality.

Trait contribution

Figure 1 illustrates which traits are in the index and how much they contribute to the overall balance of the index. The longer the bar, the greater the impact on the index, and the greater impact on the profitability of the production system.

In the Terminal Carcase Production system, growth and improved carcase eye muscle contribute the most to the index, with smaller contributions from carcass fat depth, lean meat yield and dressing percentage. Improvements in intramuscular fat and shear force contribute to maintaining lamb eating quality.

Lamb Eating Quality (LEQ)

The LEQ index is for a prime lamb operation where terminal sires are joined to ewes of a Merino/maternal breed or cross in high rainfall and/or high input management systems where internal parasites may cause significant economic losses.

Producers who select this index are interested in improving the eating quality of their lambs to a greater degree than is possible with the TCP index. Growth and carcase traits will still improve, and inclusion of worm egg count will aid in control of internal parasites.

Typical trait changes for the LEQ index include:

- increasing post weaning weight
- increasing eye muscle depth
- maintaining/small reduction in carcass fat
- increasing dressing percentage
- increasing lean meat yield
- large improvement in eating quality
- increasing resistance to worms.

Sheep with better eating quality will have higher ASBVs for intramuscular fat (more marbling) and lower ASBVs for shear force (better tenderness).

Figure 3 illustrates which traits are in the index and how much they contribute to the overall balance of the index. The longer the bar, the greater the impact on the index, and the greater impact on the profitability of the production system.

Figure 1: The traits in the TCP index and how they contribute to the overall balance of the index in the top 10% of current terminal progeny
